

INVESTOR PRODUCT BRIEF

Market Villa

A mobile-first storefront platform for small businesses that need a polished product page, simple business tools, and a direct path from browsing to WhatsApp inquiry.

Small business commerce

Product storefronts

WhatsApp selling

Version 1.0 - June 17, 2026

1. What Market Villa Is

Market Villa is a lightweight commerce presence platform for small businesses. It gives each business a clean mini website where customers can browse products, understand the business, and start a WhatsApp conversation with clear buying intent.

The app is designed for merchants who are not ready for a complex e-commerce operation but need something more trusted, organized, and shareable than social media posts or WhatsApp status updates.

The Product In One Sentence

Market Villa turns a small business into a polished, searchable, WhatsApp-ready storefront in minutes.

Who It Serves

- Small retailers selling fashion, beauty, food, phones, accessories, home items, and local products.
- Business owners who already sell through WhatsApp and need a better way to present products.
- Customers who want a simple page to browse products before contacting a seller.
- Platform operators who need tools to manage businesses, plans, payments, visibility, and domains.

Audience	Need	Market Villa Experience
Business owner	A professional store link without technical setup.	Dashboard, profile setup, product catalog, themes, and shareable store URL.
Customer	A clear way to browse and contact a seller.	Public store page, product search, product cards, and WhatsApp action.
Platform operator	Visibility into business activity and monetization.	Admin center for businesses, pricing, revenue, domains, and visibility.

2. What The App Should Look Like

Market Villa should feel modern, light, and business-ready. The visual language should communicate trust and ease: premium enough for a public customer, but simple enough for a merchant to manage daily on a phone.

Surface	Visual Direction
Public homepage	Premium but direct. It should quickly explain the value, show real storefront examples, and guide visitors to create or explore stores.
Stores page	Clean directory of live businesses with strong search, readable cards, and clear store entry points.
Public store page	Product-first storefront with business identity, cover image, catalog, product search, categories, and WhatsApp contact actions.
Mobile dashboard	Compact, bright, and light. Flat warm-purple background, white cards, minimal shadows, practical actions, and no heavy sidebar.
Admin center	Readable operational dashboard with strong contrast, clear navigation, and scan-friendly business controls.

Design Personality

- Clean and premium, but not cold.
- Mobile-first and compact, but not cramped.
- Product-focused, practical, and action-oriented.
- Purple-led brand identity supported by bright mint, soft lilac, white surfaces, and high-contrast text.
- Buttons and cards should feel familiar to mobile commerce users: clear labels, useful icons, and obvious next actions.

3. What The App Should Do

Market Villa should make the path from business setup to customer inquiry feel short and natural. The core product flow is: create a business, add products, publish a store, share the link, receive WhatsApp inquiries, and track activity.

Capability	App Behavior
Business setup	The owner creates a business profile with name, category, description, location, WhatsApp number, logo, cover image, and theme.
Product management	The owner adds and edits products with images, prices, categories, descriptions, and availability status.
Public storefront	Customers open a store link, browse products, search within the catalog, and understand the business at a glance.
WhatsApp handoff	Customer actions create a useful WhatsApp inquiry or order message that includes product/order context.
Store discovery	Visitors can browse live stores and search for businesses or products across Market Villa.
Business dashboard	Owners can view setup progress, quick actions, basic analytics, products, orders/inquiries, billing, themes, domains, and settings.
Admin center	Operators can monitor businesses, manage pricing, review revenue, handle visibility requests, and manage domain requests.

Core User Journey

- Owner signs up and creates a business workspace.
- Owner adds profile details and first products.
- Owner chooses a storefront style and publishes the store.
- Owner shares the store link across WhatsApp, Instagram, and other channels.
- Customer browses the store and starts a WhatsApp inquiry or order.
- Owner tracks product count, views, WhatsApp clicks, and store readiness from the dashboard.

4. Product Modules

Module	Purpose	Experience Goal
Marketing site	Explain Market Villa and convert visitors.	Clear promise, strong visuals, simple CTAs.
Store directory	Help customers discover businesses.	Searchable, readable, and fast.
Public store	Give each business a customer-facing page.	Product-first, trusted, mobile-ready.
Dashboard home	Show business health and next actions.	Compact overview with setup progress and quick links.
Products	Manage the catalog.	Fast product entry, clear empty states, easy editing.
Orders/inquiries	Support WhatsApp-led selling.	Clear inquiry/order summaries and action history.
Themes	Let owners choose a storefront style.	Visual previews, plan-aware theme access, simple selection.
Billing	Manage plans and payments.	Readable plan status, upgrade path, payment history.
Analytics	Show basic store activity.	Views, WhatsApp clicks, products, and customer interest signals.
Admin center	Operate the platform.	Scan-friendly controls for businesses, pricing, revenue, domains, and visibility.

5. Business Model And Growth Potential

Market Villa can grow as a SaaS platform for small businesses, with optional visibility and setup services layered around the core storefront product.

Revenue Path	Description
Subscription plans	Businesses pay for theme access, store features, visibility controls, and platform tools.
Featured visibility	Businesses can pay for better placement across discovery surfaces.
Custom domains	Businesses can request domain setup and yearly management.
Managed setup	Market Villa can support businesses that want help setting up a polished page.
Future automation	WhatsApp Cloud API, CRM follow-ups, AI discovery, and merchant growth tools can expand revenue over time.

Why It Can Matter

- It targets businesses that already sell online informally but lack a trusted storefront.
- It keeps the merchant workflow familiar by using WhatsApp instead of forcing a full checkout behavior too early.
- It creates a public discovery layer for local businesses and products.
- It can expand from storefronts into analytics, visibility, domains, CRM, and automation.

6. Success Signals

Signal	Meaning
Business activation	Owners complete setup, add products, and share their store link.
Published stores	The platform has usable customer-facing supply.
Products per store	Businesses are investing real catalog effort.
Store views	Shared links and discovery are creating traffic.
WhatsApp clicks	Customers are showing buying or inquiry intent.
Search usage	Customers are using Market Villa to discover stores/products.
Paid upgrades	Businesses see enough value to pay for better features or visibility.
Retention	Businesses return to update products and manage their store.

Product North Star: help small businesses move from scattered product posts to a trusted, searchable, WhatsApp-ready storefront that customers can browse and act on.
